OUR CAPABILITIES

ONSHORE/OFFSHORE
Modernize

Designed and developed a world class, multichannel, multi-platform payment gateway-VELA (www.payvela.com) that accepts any form of payment. This platform is currently deployed in six countries and expanding globally for one of the largest holiday resort companies in the world for onsite eCommerce channels. This has resulted in assisting our client in creating consistent seamless customer transactions and more options for payments, leading to additional revenue streams.

MANAGED SERVICES
Simplify

Developed a real-time dashboard for operational data assisting a large hospitality/hotel industry client to make better staffing purchasing, and marketing decisions to cut costs and increase revenue. The dashboard view also enabled leadership to compare and contrast performance in real time across all their global hotel brands and chains.

LEARNING/DEVELOPMENT
Replicate

Used ML/DL models and Amazon Sagify/Sagemaker to automate pattern recognition in ECG signals to differentiate between noise and good signals for a cardiac monitoring company. This added additional value by creating the ability to train and test machine models effectively and efficiently using large amounts of data.

Digital Strategy & Modernization

Data Analytics/AI (ML/DL)

Cloud Enablement

Cybersecurity

Quality Engineering & Assurance
